FUJITSU LIMITED provided technical input and review on portions of this material.

Sun Microsystems, Inc. and Fujitsu Limited each own or control intellectual property rights relating to products and technology described in this document, and such products, technology and this document are protected by copyright laws, patents and other intellectual property laws and international treaties. The intellectual property rights of Sun Microsystems, Inc. and Fujitsu Limited in such products, technology and this document include, without limitation, one or more of the United States patents listed at http://www.sun.com/patents and one or more additional patents or patent applications in the United States or other countries.

This document and the product and technology to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of such product or technology, or of this document, may be reproduced in any form by any means without prior written authorization of Fujitsu Limited and Sun Microsystems, Inc., and their applicable licensors, if any. The furnishing of this document to you does not give you any rights or licenses, express or implied, with respect to the product or technology to which it pertains, and this document does not contain or represent any commitment of any kind on the part of Fujitsu Limited or Sun Microsystems, Inc., or any affiliate of either of them.

This document and the product and technology described in this document may incorporate third-party intellectual property copyrighted by and/or licensed from suppliers to Fujitsu Limited and/or Sun Microsystems, Inc., including software and font technology.

Per the terms of the GPL or LGPL, a copy of the source code governed by the GPL or LGPL, as applicable, is available upon request by the End User. Please contact Fujitsu Limited or Sun Microsystems, Inc.

This distribution may include materials developed by third parties.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and in other countries, exclusively licensed through X/Open Company, Ltd.

Sun™, Sun Microsystems™, the Sun logo©, Java™, Netra™, Solaris™, Sun StorageTek™, docs.sun.com℠, OpenBoot™, SunVTS™, Sun Fire™, SunSolve℠, CoolThreads™, and J2EE™, are trademarks or registered trademarks of Sun Microsystems, Inc. or its subsidiaries in the U.S. and other countries.

Fujitsu and the Fujitsu logo are registered trademarks of Fujitsu Limited.

All SPARC trademarks are used under license and are registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon architecture developed by Sun Microsystems, Inc.

SPARC64 is a trademark of SPARC International, Inc., used under license by Fujitsu Microelectronics, Inc. and Fujitsu Limited.

SSH is a registered trademark of SSH Communications Security in the United States and in certain other jurisdictions.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

United States Government Rights - Commercial use. U.S. Government users are subject to the standard government user license agreements of Sun Microsystems, Inc. and Fujitsu Limited and the applicable provisions of the FAR and its supplements.

Disclaimer: The only warranties granted by Fujitsu Limited, Sun Microsystems, Inc. or any affiliate of either of them in connection with this document or any product or technology described herein are those expressly set forth in the license agreement pursuant to which the product or technology is provided.

EXCEPT AS EXPRESSLY SET FORTH IN SUCH AGREEMENT, FUJITSU LIMITED, SUN MICROSYSTEMS, INC. AND THEIR AFFILIATES MAKE NO REPRESENTATIONS OR WARRANTIES OF ANY KIND (EXPRESS OR IMPLIED) REGARDING SUCH PRODUCT OR TECHNOLOGY OR THIS DOCUMENT, WHICH ARE ALL PROVIDED AS IS, AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Unless otherwise expressly set forth in such agreement, to the extent allowed by applicable law, in no event shall Fujitsu Limited, Sun Microsystems, Inc. or any of their affiliates have any liability to any third party under any legal theory for any loss of revenues or profits, loss of use or data, or business interruptions, or for any indirect, special, incidental or consequential damages, even if advised of the possibility of such damages.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Sun Microsystems, Inc. et Fujitsu Limited détiennent et contrôlent toutes deux des droits de propriété intellectuelle relatifs aux produits et technologies décrits dans ce document. De même, ces produits, technologies et ce document sont protégés par des lois sur le copyright, des brevets, d'autres lois sur la propriété intellectuelle et des traités internationaux. Les droits de propriété intellectuelle de Sun Microsystems, Inc. et Fujitsu Limited concernant ces produits, ces technologies et ce document comprennent, sans que cette liste soit exhaustive, un ou plusieurs des brevets déposés aux États-Unis et indiqués à l'adresse http://www.sun.com/patents de même qu'un ou plusieurs brevets ou applications brevetées supplémentaires aux États-Unis et dans d'autres pays.

Ce document, le produit et les technologies afférents sont exclusivement distribués avec des licences qui en restreignent l'utilisation, la copie, la distribution et la décompilation. Aucune partie de ce produit, de ces technologies ou de ce document ne peut être reproduite sous quelque forme que ce soit, par quelque moyen que ce soit, sans l'autorisation écrite préalable de Fujitsu Limited et de Sun Microsystems, Inc., et de leurs éventuels bailleurs de licence. Ce document, bien qu'il vous ait été fourni, ne vous confère aucun droit et aucune licence, expresses ou tacites, concernant le produit ou la technologie auxquels il se rapporte. Par ailleurs, il ne contient ni ne représente aucun engagement, de quelque type que ce soit, de la part de Fujitsu Limited ou de Sun Microsystems, Inc., ou des sociétés affiliées.

Ce document, et le produit et les technologies qu'il décrit, peuvent inclure des droits de propriété intellectuelle de parties tierces protégés par copyright et/ou cédés sous licence par des fournisseurs à Fujitsu Limited et/ou Sun Microsystems, Inc., y compris des logiciels et des technologies relatives aux polices de caractères.

Par limites du GPL ou du LGPL, une copie du code source régi par le GPL ou LGPL, comme applicable, est sur demande vers la fin utilsateur disponible; veuillez contacter Fujitsu Limted ou Sun Microsystems, Inc.

Cette distribution peut comprendre des composants développés par des tierces parties.

Des parties de ce produit pourront être dérivées des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun™, Sun Microsystems™, le logo Sun©, Java™, Netra™, Solaris™, Sun StorageTek™, docs.sun.com℠, OpenBoot™, SunVTS™, Sun Fire™, SunSolve℠, CoolThreads™, et J2EE™ sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. , ou ses filiales aux Etats-Unis et dans d'autres pays.

Fujitsu et le logo Fujitsu sont des marques déposées de Fujitsu Limited.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

SPARC64 est une marques déposée de SPARC International, Inc., utilisée sous le permis par Fujitsu Microelectronics, Inc. et Fujitsu Limited.

SSH est une marque déposée registre de SSH Communications Security aux Etats-Uniset dans certaines autres juridictions.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une license non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui, en outre, se conforment aux licences écrites de Sun.

Droits du gouvernement américain - logiciel commercial. Les utilisateurs du gouvernement américain sont soumis aux contrats de licence standard de Sun Microsystems, Inc. et de Fujitsu Limited ainsi qu'aux clauses applicables stipulées dans le FAR et ses suppléments.

Avis de non-responsabilité: les seules garanties octroyées par Fujitsu Limited, Sun Microsystems, Inc. ou toute société affiliée de l'une ou l'autre entité en rapport avec ce document ou tout produit ou toute technologie décrit(e) dans les présentes correspondent aux garanties expressément stipulées dans le contrat de licence régissant le produit ou la technologie fourni(e).

SAUF MENTION CONTRAIRE EXPRESSÉMENT STIPULÉE DANS CE CONTRAT, FUJITSU LIMITED, SUN MICROSYSTEMS, INC. ET LES SOCIÉTÉS AFFILIÉES REJETTENT TOUTE REPRÉSENTATION OU TOUTE GARANTIE, QUELLE QU'EN SOIT LA NATURE (EXPRESSE OU IMPLICITE) CONCERNANT CE PRODUIT, CETTE TECHNOLOGIE OU CE DOCUMENT, LESQUELS SONT FOURNIS EN L'ÉTAT. EN OUTRE, TOUTES LES CONDITIONS, REPRÉSENTATIONS ET GARANTIES EXPRESSES OU TACITES, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE À LA QUALITÉ MARCHANDE, À L'APTITUDE À UNE UTILISATION PARTICULIÈRE OU À L'ABSENCE DE CONTREFAÇON, SONT EXCLUES, DANS LA MESURE AUTORISÉE PAR LA LOI APPLICABLE.

Sauf mention contraire expressément stipulée dans ce contrat, dans la mesure autorisée par la loi applicable, en aucun cas Fujitsu Limited, Sun Microsystems, Inc. ou l'une de leurs filiales ne sauraient être tenues responsables envers une quelconque partie tierce, sous quelque théorie juridique que ce soit, de tout manque à gagner ou de perte de profit, de problèmes d'utilisation ou de perte de données, ou d'interruptions d'activités, ou de tout dommage indirect, spécial, secondaire ou consécutif, même si ces entités ont été préalablement informées d'une telle éventualité.

LA DOCUMENTATION EST FOURNIE "EN L'ETAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISEE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFACON.

Server Highlights

The Sun SPARC Enterprise T5120 (FIGURE: Sun SPARC Enterprise T5120 Server on page 3) and T5220 (FIGURE: Sun SPARC Enterprise T5220 Server on page 3) servers are scalable, reliable, high-performance, entry-level servers, optimized for enterprise data centers. These servers offer the following key features:

- The UltraSPARC T2 multicore processor with CoolThreads technology for high-throughput and energy savings.
- High levels of system uptime through the processor and memory reliability-availability-serviceability (RAS) features, coupled with redundancy of some systems components, support for hardware RAID (0+1), and the Predictive Self-Healing features of the Solaris 10 Operating System (Solaris OS).
- Both servers come in a space efficient, rack-optimized form factor chassis, 1U for the Sun SPARC Enterprise T5120 server, and 2U for the Sun SPARC Enterprise T5220 server.
- Investment protection with SPARC V9 binary application compatibility and the Solaris 10 OS. The Solaris 10 OS also provides features such as Solaris Predictive Self-Healing, Solaris Dynamic Tracing, and support across UltraSPARC platforms.
- Unified server management though the use of the Integrated Lights Out Manager (ILOM) interface. ILOM integrates and manages CoolThreads and x64 platforms with the same tool set, and in heterogeneous environments, using industry standard element management tools and enterprise frameworks.

The following figure shows the Sun SPARC Enterprise T5120 server chassis as viewed from the front and top.

Features at a Glance

The following table describes in summary form the main features of the Sun SPARC Enterprise T5120 and T5220 servers.

TABLE: Summary of Features

Feature	Description
Chassis dimensions and rackmounting hardware*	**T5120:** 1 rack unit (1U) • Width: 425 mm (16.75 in.) • Height: 44 mm (1.75 in.) • Depth: 714 mm (28.13 in.) **T5220:** 2 rack units (2U) • Width: 425 mm (16.75 in.) • Height: 88 mm (3.49 in.) • Depth: 714 mm (28.125 in.)
Processor	One UltraSPARC T2 multicore processor with one of the following number of cores: • 4 cores (32 threads); 1.2 GHz • 8 cores (64 threads); 1.2, 1.4, or 1.6 GHz
Memory Slots/Capacity	Sixteen FBDIMM slots supporting 2-, 4-, and 8-Gbyte modules (maximum capacity of 128 Gbytes of system memory)

TABLE: Summary of Features *(Continued)*

Feature	Description
Internal Hard Drives*	**T5120:** Up to eight 73-Gbyte, 146-Gbyte, or 300-Gbyte 2.5 inch SAS hard drives (hot-pluggable) Up to four solid-state drives can be used in conjunction with disk-based hard drives for a total of eight hard drive storage units. Integrated hard drive controller supports RAID 0 and RAID 1. **T5220:** Up to sixteen 73-Gbyte or 146-Gbyte, or 300-Gbyte 2.5 inch SAS hard drives (hot-pluggable). Up to eight solid-state drives can be used in conjunction with disk-based hard drives for a total of sixteen hard drive storage units. Integrated hard drive controller supports RAID 0 and RAID 1. **Note -** Some T5120 models only support up to four hard drives. Some T5220 models only support up to eight hard drives.
Optical Media Device	One, slot-loading, slimline DVD drive, supporting CD-R/W, DVD-R/W, DVD+R/W
Power Supplies	Two hot-swappable power supply units providing N+1 redundancy
Cooling*	**T5120:** Four to seven hot-swappable fan modules (two fans per module) **T5220:** Three to four hot-swappable fan modules (two fans per module)
Ethernet Ports	Four 10/100/1000 Mbps Ethernet, RJ-45-based, autonegotiating ports (on two separate controllers) **Note -** 10-Gbit Ethernet ports are available by adding XAUI cards to the I/O expansion slots. For each XAUI card added, one onboard 1-Gbit Ethernet port is disabled.

TABLE: Summary of Features *(Continued)*

Feature	Description
PCI Express Interfaces*	**T5120:** Three low-profile PCI Express slots with the following slot designated specifications†: • One slot – PCIe, 8-lane • Two slots – PCIe 4-lane (alternatively, these slots can be used for 10-Gbit Ethernet by adding Sun XAUI cards) • Up to 5 additional PCIe slots are available using an External I/O Expansion Unit **T5220:** Six low-profile PCI Express slots with the following slot designated specifications† • Two slots – PCIe, 8-lane • Two slots – PCIe, 4-lane • Two slots – PCIe 4-lane (alternatively, these slots can be used for 10-Gbit Ethernet by adding Sun XAUI cards) • Up to 10 additional PCIe slots are available using up to two External I/O Expansion Units **Note -** All PCIe cards are installed using supplied riser boards
USB Ports	Four USB 2.0 ports (2 forward, 2 rear facing).
Additional Ports	The following connectors are located on the rear of the server: • One RJ-45 serial management port (SER MGT) – the default connection to the service processor • One 10/100 Mbps Ethernet network management port (NET MGT) – connection to the service processor • One DB-9 serial port – connection to the host
Remote Management	Onboard Integrated Lights Out Manager (ILOM), with two command sets: • ILOM • ALOM CMT compatibility shell (legacy command set) Both command sets are accessible through the RJ-45 serial and 10/100 Mbps Ethernet interfaces.

TABLE: Summary of Features *(Continued)*

Feature	Description
Cryptography	Processor-integrated, cyptographic acceleration that supports industry-standard security ciphers Refer to the server product notes for information on the minimum version of supported OS and required patches
Operating System	Solaris 10 OS preinstalled on disk 0 Refer to the server product notes for information on the minimum version of supported OS and required patches.
Other Software	• Java Enterprise System • Logical Domains Manager • Sun Studio Refer to the server product notes for details about specific versions of the preinstalled software.

* This symbol marks a feature specification that differs between the two servers models.

† PCI-e and PCI-X specifications described in this table list the physical requirements for PCI cards. Additional support capabilities must also be provided (such as device drivers) for a PCI card to function in the server. Refer to the specifications and documentation for a given PCI card to determine if the required drivers are provided that enable the card to function in this server.

Chip-Multithreaded Processor and Memory Technology

The UltraSPARC T2 multicore processor is the basis of the Sun SPARC Enterprise T5120 and T5220 servers. The UltraSPARC T2 processor is based on chip multithreading (CMT) technology that is optimized for highly threaded transactional processing. The UltraSPARC T2 processor improves throughput while using less power and dissipating less heat than conventional processor designs.

Depending on the model purchased, the processor has four, six, or eight UltraSPARC cores. Each core equates to a 64-bit execution pipeline capable of running eight threads. The result is that the 8-core processor handles up to 64 active threads concurrently.

Additional processor components, such as L1 cache, L2 cache, memory access crossbar, memory controllers, and the I/O interface have been carefully tuned for optimal performance.

Performance Enhancements

The Sun SPARC Enterprise T5120 and T5220 servers running the Solaris 10 OS provide several new performance enhancing technologies with its sun4v architecture and multicore, multithreaded UltraSPARC T2 processor.

Some of these enhancements are:

- A floating point unit (FPU) for each core
- Four independent dual-channel memory controllers that use the latest fully buffered memory technology
- Processor-integrated cyptographic acceleration
- Large page optimization
- Reduction on TLB misses
- Optimized block copy
- Support for Sun's 10-Gbit Ethernet with the addition of XAUI cards

Preinstalled Solaris Operating System

The Sun SPARC Enterprise T5120 and T5220 servers are preinstalled with the Solaris 10 OS, and offer the following Solaris OS features:

- Stability, high performance, scalability, and precision of a mature 64-bit operating system.
- Support for over 12,000 leading technical and business applications.
- Solaris Containers – Isolate software applications and services using flexible, software-defined boundaries.
- DTrace – A comprehensive dynamic tracing framework for tuning applications and troubleshooting systemic problems in real time.
- Predictive Self-Healing – Capability that automatically diagnoses, isolates, and recovers from many hardware and application faults.
- Security – Advanced security features designed to protect the enterprise at multiple levels.

- Network Performance – Completely rewritten TCP/IP stack dramatically improves the performance and scalability of your networked services.

You can use the preinstalled Solaris 10 OS, or reinstall a supported version of the Solaris 10 OS from your network, CD, or downloaded copy. Refer to the *Sun SPARC Enterprise T5120 and T5220 Servers Product Notes* for information on the supported OS releases for your server.

Related Information

- *Sun SPARC Enterprise T5120 and T5220 Servers Product Notes*
- Solaris OS documentation (http://docs.sun.com/app/docs/prod/solaris)

Hardware-Assisted Cryptography

The UltraSPARC T2 multicore, multithreaded processors provide hardware-assisted acceleration of symmetric, asymmetric, hashing and random number generation cryptographic operations as follows:

- Asymmetric algorithms – RSA, DSA, Diffie Hellman, and Elliptic Curve cryptography
- Symmetric algorithms – AES, 3DES, and RC$
- Hashing algorithms – SHA1, SHA256, and MD5

The Solaris 10 OS provides the multithreaded device driver that supports the hardware-assisted cryptography.

Related Information

- Solaris OS documentation (http://docs.sun.com/app/docs/prod/solaris)

Support for Virtualization Through Logical Domains (LDoms)

The Sun SPARC Enterprise T5120 and T5220 servers support the use of Logical Domains (LDoms) technology. Through the use of the Solaris OS and the built-in server firmware, and by installing the Logical Domains Manager software, you can virtualize the compute services that run on your server.

A *logical domain* is a discrete, logical grouping with its own operating system, resources, and identity within a single computer system. Each logical domain can be created, destroyed, reconfigured, and rebooted independently, without requiring a power cycle of the server.

You can run a variety of applications software in different logical domains and keep them independent for performance and security purposes.

Each logical domain can be managed as an entirely independent machine with its own resources, such as:

- Kernel, patches, and tuning parameters
- User accounts and administrators
- Network interfaces, MAC addresses, and IP addresses

Each logical domain can interact only with those server resources made available to it. The configuration is controlled using the Logical Domains Manager.

- *Sun SPARC Enterprise T5120 and T5220 Servers Product Notes*
- Logical Domains (LDoms) software documentation (http://docs.sun.com/app/docs/prod/ldoms)

Remote Manageability With ILOM

The Integrated Lights Out Manager (ILOM) feature is a service processor that is built into the server, and enables you to remotely manage and administer the server.

The ILOM software is preinstalled as firmware, and initializes as soon as you apply power to the system.

ILOM enables you to monitor and control your server over an Ethernet connection (supports SSH), or by using a dedicated serial port for connection to a terminal or terminal server. ILOM provides a command-line interface and a browser-based interface that you can use to remotely administer geographically distributed or physically inaccessible machines. In addition, ILOM enables you to run diagnostics (such as POST) remotely that would otherwise require physical proximity to the server's serial port.

You can configure ILOM to send email alerts of hardware failures and warnings, and other events related to the server. The ILOM circuitry runs independently of the server, using the server's standby power. Therefore, ILOM firmware and software continue to function when the server operating system goes offline or when the server is powered off. ILOM monitors the following Sun SPARC Enterprise T5120 and T5220 server conditions:

- CPU temperature conditions
- Hard drive status
- Enclosure thermal conditions
- Fan speed and status
- Power supply status
- Voltage conditions
- Solaris watchdog, boot time-outs, and automatic server restart events

In addition to the ILOM CLI and browser interface, you can set up the server to use the ALOM CMT compatibility CLI. The ALOM CMT compatibility CLI provides commands that approximate the ALOM CMT UI that was provided on some previous servers.

High Levels of System Reliability, Availability, and Serviceability

Reliability, availability, and serviceability (RAS) are aspects of a system's design that affect its ability to operate continuously and to minimize the time necessary to service the system. *Reliability* refers to a system's ability to operate continuously without failures and to maintain data integrity. System *availability* refers to the ability of a system to recover to an operational state after a failure, with minimal impact. *Serviceability* relates to the time it takes to restore a system to service following a system failure. Together, reliability, availability, and serviceability features provide for near-continuous system operation.

To deliver high levels of reliability, availability, and serviceability, the Sun SPARC Enterprise T5120 and T5220 servers offer the following features:

- Ability to disable individual threads and cores without rebooting
- Lower heat generation, reducing hardware failures
- Hot-pluggable hard drives
- Redundant, hot-swappable power supplies (two)
- Redundant N+1 hot-swappable fan modules

- Environmental monitoring
- Internal hardware drive mirroring (RAID 1)
- Error detection and correction for improved data integrity
- Easy access for most component replacements

Hot-Pluggable and Hot-Swappable Components

Sun SPARC Enterprise T5120 and T5220 server hardware is designed to support hot-plugging of the chassis-mounted hard drives, and hot-swapping of fan units, and power supplies. By using the proper software commands, you can install or remove these components while the system is running. Hot-swap and hot-plug technology significantly increases the system's serviceability and availability by providing the ability to replace hard drives, fan units, and power supplies without service disruption.

Power Supply Redundancy

The Sun SPARC Enterprise T5120 and T5220 servers provide two hot-swappable power supplies, enabling the system to continue operating should one of the power supplies fail or if a power source fails.

Environmental Monitoring

The Sun SPARC Enterprise T5120 and T5220 servers feature an environmental monitoring subsystem that protects the server and its components against:

- Extreme temperatures
- Lack of adequate airflow through the system
- Power supply failures
- Hardware faults

Temperature sensors are located throughout the system to monitor the ambient temperature of the system and internal components. The software and hardware ensure that the temperatures within the enclosure do not exceed predetermined safe operation ranges. If the temperature observed by a sensor falls below a low-temperature threshold or rises above a high-temperature threshold, the monitoring subsystem software lights the amber Service Required LEDs on the front and back panels. If the temperature condition persists and reaches a critical threshold, the system initiates a graceful system shutdown. In the event of a failure of the service processor, backup sensors protect the system from serious damage, by initiating a forced hardware shutdown. The Service Required LEDs remain lit after an automatic system shutdown to aid in problem diagnosis.

The power subsystem is monitored in a similar fashion by monitoring power supplies and reporting any fault in the front and rear panel LEDs.

Support for RAID Storage Configurations

Using the on-board SAS controller, you can set up hardware RAID 1 (mirroring) and hardware RAID 0 (striping) configurations for any pair of internal hard drives, providing a high-performance solution for hard drive mirroring.

Additional RAID levels are supported by installing the StorageTek SAS HBA (internal PCIe card). This option requires a different set of internal cables.

By attaching one or more external storage devices to the Sun SPARC Enterprise T5120 and T5220 servers, you can use a redundant array of independent drives (RAID) software application such as Solstice DiskSuite or VERITAS Volume Manager[1] to configure system drive storage in a variety of different RAID levels.

Error Correction and Parity Checking

The UltraSPARC T2 multicore processor provides parity protection on its internal cache memories, including tag parity and data parity on the D-cache and I-cache. The internal L2 cache has parity protection on the tags, and ECC protection on the data.

1. Software RAID applications such as VERITAS Volume Manager are not included with this server. You must obtain and license them separately.

Fault Management and Predictive Self Healing

The Sun SPARC Enterprise T5120 and T5220 servers provide the latest fault management technologies. The Solaris 10 OS architecture provides a means for building and deploying systems and services capable of *Predictive Self-Healing*. Self-healing technology enables systems to accurately predict component failures and mitigate many serious problems before they actually occur. This technology is incorporated into both the hardware and software of the Sun SPARC Enterprise T5120 and T5220 servers.

At the heart of the Predictive Self-Healing capabilities is the Solaris Fault Manager, a new service that receives data relating to hardware and software errors, and automatically and silently diagnoses the underlying problem. Once a problem is diagnosed, a set of agents automatically responds by logging the event, and if necessary, takes the faulty component offline. By automatically diagnosing problems, business-critical applications and essential system services can continue uninterrupted in the event of software failures or major hardware component failures.

Rackmountable Enclosure

The Sun SPARC Enterprise T5120 and T5220 servers use a space-saving 1U or 2U-high rackmountable enclosure that can be installed into a variety of industry standard racks.
